Concierge

by Aeris Solutions

Concierge V3 allows you to effortlessly guide guest through your property to their in-house event, restaurant or guest rooms . Designed for hotels, convention centres and venues, Concierge is a simple to use, feature rich, digital directional signage solution.

Simple To Use

The Concierge software interface will feel familiar to users within minutes, even for novice users, leaving staff time to deal with more important matter such as attending to guests and delegates. Our philosophy with Concierge is that software should not be difficult to use in order to provide good functionality.

Browser Based Software

Browser based allows staff to update the directory boards from any computer on the venues network.

Shows A Variety Of Information

Room Names, Company Names, Company logos, Directional arrows, Floor Levels, Customised directions such as “take lift to level six” Meeting Times can all be shown on the screens to offer comprehensive information to your clients.

Show Promotional Content

Concierge allows you to run a variety of content on the screens when they are not being used for directional signage. Promote weekend packages, bars, restaurants, local stores, day spas and much more using Concierge digital directory boards. You can even put your own customised QR codes on the screens to allow people to take away some valuable information such as contact details for sales staff or a special weekend package deal.

Guide Clients Using Arrows And Icons

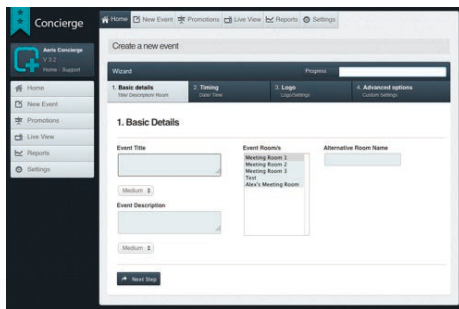

Its one thing to tell people to go to the Grand Ballroom, but chances are they won't know where that is. Concierge allows you to program screens to show: arrows, lifts, escalators and other icons so that delegates and visitors know where they have to go.
